IDEA配置GIT

注:此方法可用于配置github

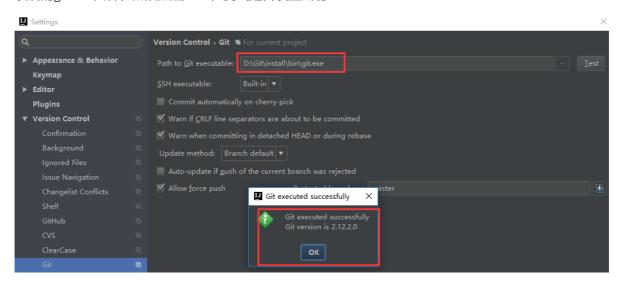

1.在github中创建一个账号: https://github.com/join?source=header-home

2.下载并安装git: https://git-scm.com/downloads

3.安装成功后打开Git Bash,输入下列命令,设置git全局用户名和邮箱

4.在IDEA中设置Git,在File-->Setting->Version Control-->Git-->Path to Git executable选择你的git安装后的git.exe文件,然后点击Test,测试是否设置成功

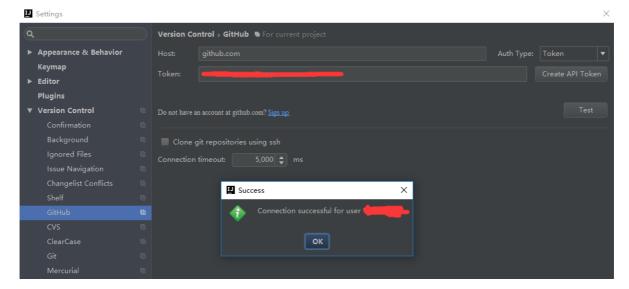

5.在IDEA中设置GitHub, File-->Setting->Version Control-->GibHub

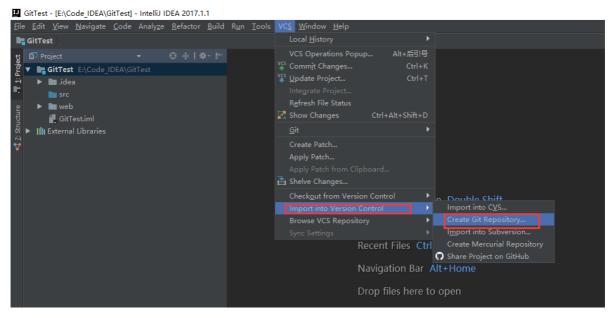

Host: github.com

Token: 点击Create API Token, 输入在github中注册的用户名和密码生成token

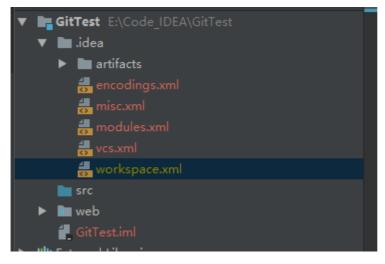

点击Test,测试是否连接成功

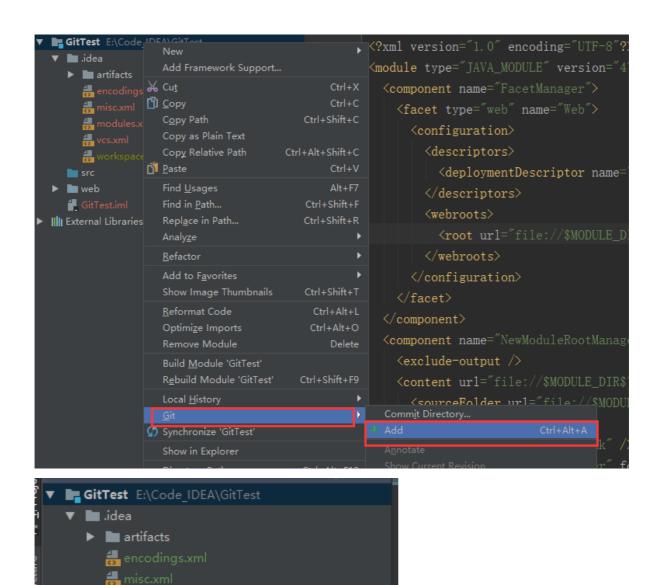

6.创建本地仓库, VCS-->Import into Version Control-->Create Git Repository...

在弹框中选中项目所在的位置,点击OK,此时项目文件全部变成红色(若选中其他位置,则git-->add不可点选,不知为何)

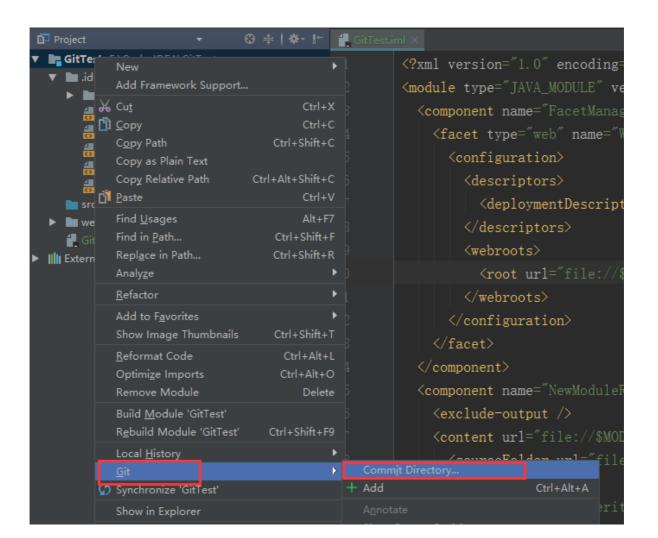

7.上传项目到本地仓库,项目右键选择Git-->add,此时项目文件变成绿色,此时文件只是处于暂存区,并没有真正进入到版本库中

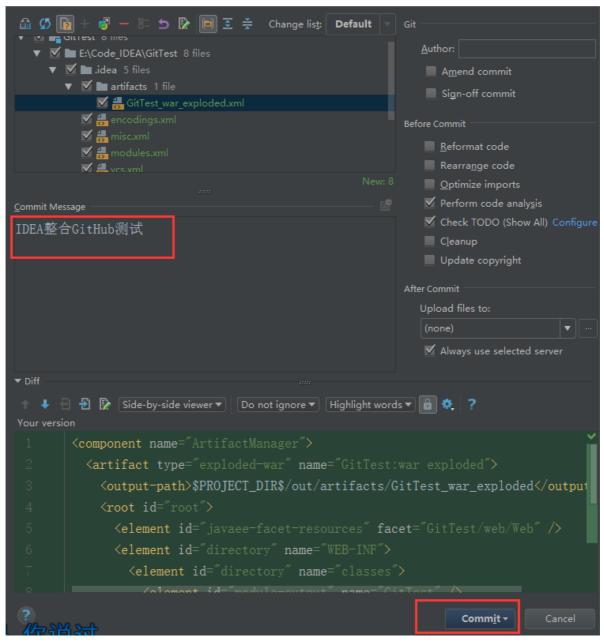

项目右键Git--> Commit Directory,在弹窗中输入Commit Message,点击commit,此时项目文件从暂存区真正进入版本库中,项目文件变成白色

src
web

GitTest.iml

这里选择commit and push

然后配置push的信息 push即可
